Environmental Physiology Of Plants

Alastair Fitter Robert Hay

Environmental Physiology

The text deals with plant physiological responses to the environment, focusing on the boundary between physiology and ecology, and the treatment is largely based on North American and European examples with reference to the tropics when necessary. Environmental Physiology of Plants - 3rd Edition - Elsevier

The Physiology EEPP section is the only theme-based section within the American Society of Plant Biologists. This section, Plant Environmental Physiology Group - British Ecological Society, focuses on processes involved in plant growth and development as the primary objective of research in the area of environmental physiology. This includes determining plant physiological responses to the environment, focusing on the boundary between physiology and ecology, and the treatment is largely...
